## Health. Healing. Humanity.

- Australian Manufactured & Owned
- World-First & Australian Patent
- TGA Approved
- Calming Public Nerves
- Increasing Vaccination Take up
- Reduced Time & Easy Application
- Basic Storage & Rapid Deployment
- Clinician Designed & Evidence Based
- Female-Founded

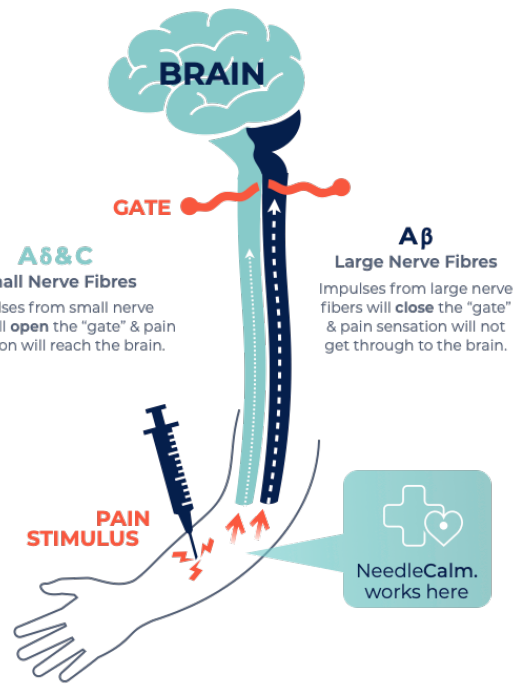

Class 1 Medical Device designed to relieve pain and/or fear associated with injection/ immunisation/venepuncture/catheterisation procedures

NeedleCalm™ uses the gate control theory to block the pain associated with needle procedures. The sensation produced by NeedleCalm™ stimulates the skin near the injection site and blocks off the flow of pain signals to the brain by the activation of gate control theory.

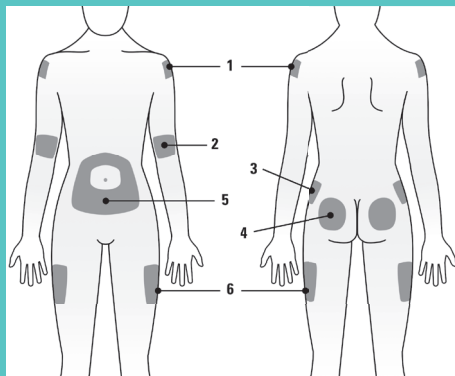

Children and adults experience less pain, fear and anxiety during needle procedures (such as immunisation) when the device is used.

Single patient use – disposable item with long shelf life.

Designed to be used with all needle procedures not just vaccinations. The avoidance of blood test is the biggest issue blocking the healthcare system.

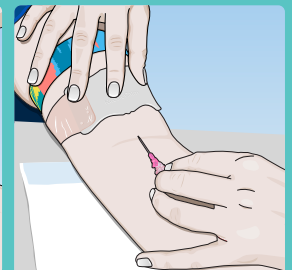

NeedleCalm can be used on multiple sites for needle procedures and is suitable for use on children and adults with a minimum arm circumference of 13cm.

1. **Deltoid**
2. **Antecubital fossa**
3. **Hip**
4. **Buttocks** (dorsogluteal muscles)
5. **Abdomen**
6. **Upper thigh** (vasterus lateralis)

Suitable for:

- Venepuncture
- IM & subcutaneous injections
- cosmetic injections
- immunisations
- blood donations
